This project is not structured as a bazaar repository, but could be. The documentation is all written by hand, and it's a bit hard to get up and running when the main documentation is broken. Any way you can put the docs together for a web site? The docs do not have any external dependencies except the API documentation itself. I can make the docs available as a tarball if you would

like them packaged up. I have setup Sphinx to generate the docs from the _build/html/_ dir. My solution is using the two following files from the PDF: In order to find them I used the command line tool called pdfgrep which is distributed with the same source as the pdftk library. For example: python pdfgrep ../../PDF/foo.pdf 0x26 0x35 0x3a 0x42 0x49 0x4f 0x6e 0x74 0x7b 0x82 0x93 0x9c 0xa6 0xab 0xb2 0xbc 0xbe 0xc4 0xd1 0xd7 0xe0 0xe6 0xed 0xf3 0xf7 0xff 0xfc 0x103 0x108 0x10e 0x11b 0x121 0x12e 0x130 0x13c 0x148 0x14c 0x15b 0x166 0x16e 0x17c 0x182 0x190 0x193 0x194 0x197 0x198 0x1a1 0x1a2 0x1a3 0x1b0 0x1b7 0x1c4 0x1c5 0x1c6 0x1c7 0x1d3 0x1d4 0x1d5 0x1d8 0x1d9 0x1da 0x1dd 0x1de 0x1df 0x1e1 0x1e2 0x1e4 0x1e5 0x1e6 0x1e7 0x1e8 0x1e9 0x1ea 0x1eb 0x1ec 0x1ed 0x1ee 0x1ef 0x1f2 0x1f3 0x1f4 0x1f5 0x1f6 0x1f7 0x1f8 0x 82157476af
